

# ILLINOIS SMART SOLAR

## OVERVIEW OF THE ALLIANCE

We are a group of organizations and individuals who seek to grow solar energy in Illinois. We aim to bring solar power into our neighborhoods responsibly to ensure that the growth of this important resource benefits all of our communities. Committed to education, community engagement and solar policies that benefit us all, we will grow Illinois' clean energy future and ensure the path to a greener tomorrow.

As a learning and collaborative community we are committed to:

1

### **Educating our communities on the power of solar and clean energy**

As solar power becomes increasingly available to Illinois residents, we must educate our communities on what solar will mean for our state.

2

### **Exploring and pursuing smart solar policies in Illinois**

We seek to explore and pursue solar policies that benefit us all, including funding for the development of solar in low-income communities.

3

### **Seeking solar development in Illinois and in our communities**

As a group, we collaborate to identify opportunities to jumpstart solar – right in our backyards.

**ComEd is a proud principle founder and sponsor of the ISSA**
